Due to various online browsers, platforms and screen sizes our website will use each image in 3 different proportions. Our images will need to work effectively in all of the alternate depths (heights) outlined below (without cropping off the tops of peoples heads, cutting out important elements etc.). We may request to center the talent or focal element, align talent on right rule of thirds guide line or align to the left rule of thirds guide line.

White guides are using rule of thirds

Original Raw Size - 5616 x 3744px (size based on what was supplied by Terry in previous shoots)

16:9 ratio - is our largest required ratio

21:9 ratio - measured from the top of the image

3/5ths - our minimum depth used = 3/5ths of 21:9 depth (centered in 21:9 ratio area)
